

# RIIWH204D - Work Safely at Heights

## About this Course

### Course Description:

The Working at Heights course provides essential training for individuals who perform tasks at heights. Participants will learn how to identify fall hazards, use fall protection equipment, and implement safe work procedures to prevent accidents. This training ensures compliance with workplace safety regulations and enhances worker confidence when operating at elevated levels.

The course includes both theory and practical components, allowing participants to practice safety procedures in a controlled environment. By the end of the training, attendees will be able to conduct risk assessments, use harnesses correctly, and apply fall arrest systems effectively.

### Location:

Public courses are conducted at our facilities in **Sydney**. Private courses can be arranged at your site, provided it meets training and assessment requirements.

### Course Outline:

- Onsite training available
- Nationally recognised certification
- Practical and theoretical training
